

Beyond the Buzzwords

Accessible AI
that levels up
your whole team

INTRODUCTION

AI is, undoubtedly, the tech buzzword *du jour*. But it's far from being used to its full potential. Either because people fear the robots taking over, or, just as likely, because they simply don't know how.

AI shouldn't be reserved for data scientists. Or locked behind lines of code. With the right platform, anyone can use AI tools—no complex setups, just instant impact.

With AI built into its core, the Nextworld platform bridges the gap between the “techies” and the rest of us. Now, everyone can access the same tools and capabilities. Business users across departments can optimize processes, reduce costs, and work more efficiently.

AI Tools Everyone Can Use

Nextworld Intelligence is equipped with a toolkit that speaks your language. Literally. **Just ask.**

AI TOOLS EVERYONE CAN USE

Conversational AI, at your service

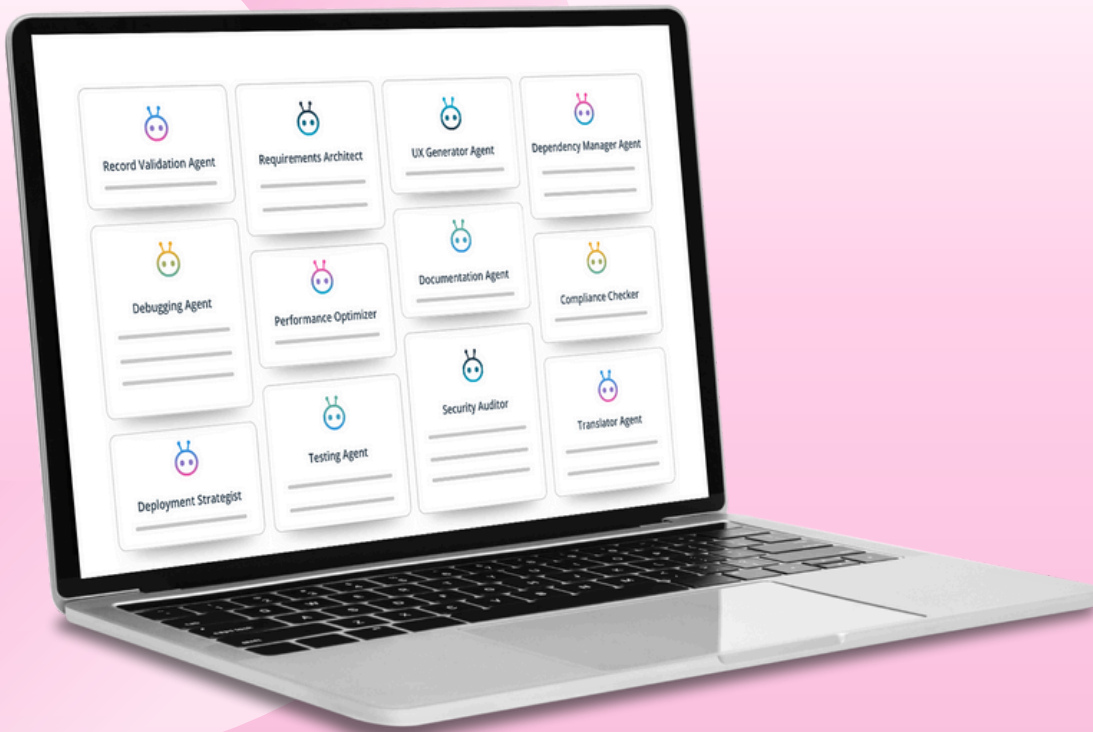

Introducing Ed: Your built-in AI assistant

Ed is ready to answer questions, automate processes, and find what you need without the technical hoops. Using interactive chat and plain language, Ed helps even the least technical person on your team improve productivity. You know the type—the ones who would rather curl up into a ball under their desk than learn the ins and outs of a new software tool.

Wondering where your invoices are or how to find last quarter's sales projections? Want to auto-generate compliance reports? Whether you don't know where to start or just want to skip a few steps in your workflow with process automation, just ask Ed.

If you're thinking, "great, another chatbot..." think again. Ed doesn't work alone. He commands and orchestrates a team of AI agents that handle workflows across your business.

AI TOOLS EVERYONE CAN USE

Productivity funk? Bring in the Agents

Remember the hesitancy to adopt AI for fear of the robots taking over? It's not man vs. machine—it's humans, *amplified*.

Deploy AI “teammates” that plan, prioritize, and execute on workflows. These agents learn from past decisions, meaning they get smarter and more productive all the time. Use them as your sparring partner, while you’re at it. Tell Ed what you’re stuck on, and he can interact with his agents to provide suggestions that get your productivity flowing.

When you let AI take on the busy work, your human teammates are free to focus on the more challenging (read: appealing & inspiring) projects that drive business growth and unlock productivity at scale.

AI TOOLS EVERYONE CAN USE

Master your data, don't drown in it

Stop spending hours in spreadsheets, guessing at trends based on complex number patterns, and missing red flags due to undiscovered data anomalies. Data can be an invaluable resource, but only if you know how to use it. You don't have to be a data analyst to make sense of messy numbers, you just need the right tools.

Nextworld's AutoML is an end-to-end model development tool that allows anyone to build models in plain English, no coding required.

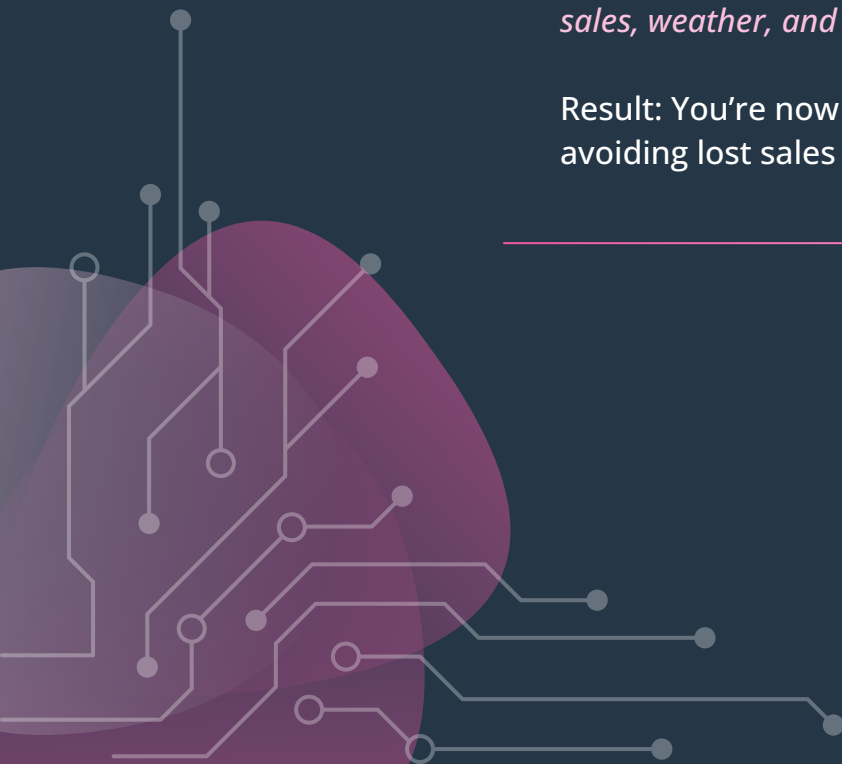

Here are some examples of how AutoML can help you do more with your data:

Predict the future
No crystal ball required

Pain: You're always reactive to changes in demand. Sudden demand spikes cause stockouts and leave you scrambling.

AI Solution: AutoML builds a predictive model based on trends
"Show me which products will sell out next month based on past sales, weather, and upcoming promotions."

Result: You're now proactive, stocking up before the rush and avoiding lost sales and disappointed customers.

Tame messy data
No spreadsheet
nightmares

Pain: Your customer surveys, invoices, and reports pile up in siloed sources and random formats—half in email, half in PDF.

AI Solution: AutoML cleans and tags data automatically

“Organize 500+ customer feedback comments by topic (pricing, shipping, quality) and flag urgent complaints.”

Result: Your support team spots a defective product trend in minutes rather than months.

With Nextworld, anyone can build models, define data inputs and outputs, and apply and refine algorithms in plain English. Through an iterative training process, your models can learn to cleanse and classify your semi-structured data, auto-format it, perform regression analysis, and even detect and predict anomalies.

AI that works everywhere you do

With its user-friendly interface, Nextworld Intelligence uses natural language processing to help address challenging use cases across your organization.

OPERATIONS

Stop the scramble. Streamline inventory.

Before:

Teams manually track supply chain disruptions and reorder points—reacting late and losing time.

With Nextworld Intelligence:

"Alert me when inventory for top SKUs is projected to run low based on sales trends and vendor delays."

Result:

No more guesswork. Reorders are triggered automatically. Downtime is avoided. Customers stay happy.

FINANCE

No spreadsheet gymnastics. Just smarter decisions.

Before:

Financial planning depends on outdated reports and siloed data.

With Nextworld Intelligence:

"Analyze quarterly spend trends and flag anomalies over \$5K."

Result:

Finance spots overspending instantly and reallocates budget proactively—with zero IT bottlenecks.

HUMAN RESOURCES

Make smarter people decisions—without chasing down data.

Before:

Employee information is scattered across systems. Keeping track of roles, departments, and changes is slow, manual, and error-prone.

With Nextworld Intelligence:

"Highlight employees with overlapping responsibilities, upcoming contract renewals, or missing compliance documentation across business units."

Result:

HR leaders get instant visibility into workforce dynamics, streamline role alignment, and stay ahead of compliance gaps—without digging through files or waiting on reports.

COMPLIANCE & AUDIT

Stay ahead of the audit curve.

Before:

Audit prep is a scramble for files, reports, and paper trails.

With Nextworld Intelligence:

"Generate an audit-ready report for all vendor payments over \$10K in the last 12 months."

Result:

Reports are generated in seconds—not weeks. Audits are less painful. Risk is reduced.

SALES & CUSTOMER SUCCESS

Get closer to your customers—automatically.

Before:

Teams waste hours combing through CRM notes, support tickets, and feedback.

With Nextworld Intelligence:

"Show customer accounts with declining engagement and unresolved tickets in the last 30 days."

Result:

Reps know exactly who to follow up with, and why. Churn goes down. Satisfaction goes up.

Unleash your productivity potential with Nextworld Intelligence

You don't have to have a PhD, AI is for everyone.

With AI built into its core, the Nextworld Platform empowers your entire organization to think bigger, act bolder, and innovate at the speed of business.
