

The Power of Integrated Field Inventory®

Empower teams and enable cross-functional collaboration with uninterrupted oversight of people, processes, and assets in the field. From the back office to the field and all the steps in between, increase visibility, reduce carrying costs, accelerate inventory turns, and improve productivity.

Mobile Enterprise Platform: Equipping your teams with a library of mobile-first applications to manage project materials, inventory, and high-value assets from any device, whether online or offline.

Field Workers – On The Road

ACCESS REAL-TIME INFORMATION FROM ANYWHERE, CONNECTED OR NOT

Manage and track inventory on the go and in real time. Field operations teams can ensure they have the right tools and inventory to complete a job, minimizing carrying costs and reducing the risk of stockouts. They can also capture data from anywhere, on any device, at the point of activity.

Seamless Integration with Current Systems: Gone are the days of paper shuffling causing information delays, or employing multiple disjointed systems to complete and track tasks. Create a unified ecosystem with one or many ERPs, providing the back office a unified and streamlined inventory management experience.

Back Office

ACCELERATE CASH CONVERSION WITH DATA-BACKED DECISION MAKING

Arm finance, operations, and executive teams with a single source of truth for all your inventory data. Custom dashboards give users real-time visibility into job profitability, inventory consumption, asset utilization, job status, and so much more. When the back office can see big-picture trends from the warehouse, on the production line, or out in the field, that data analysis helps them make smarter, faster business decisions. They can also boost speed to cash by identifying and eliminating inefficiencies throughout the supply chain.

Configurable Technology: With Field Inventory, your organization gains the flexibility to build new applications or modify modules, workflows, and business logic to align with your evolving processes. This allows you to compose solutions that support changing requirements without the need for extensive and expensive custom development.

Artificial Intelligence: Inventory levels can be automatically adjusted and refined based on historical trends and pre-set rules.

Warehouse

BOOST EFFICIENCY AND INCREASE INVENTORY OPTIMIZATION

Automate inbound, outbound, and storage processes so you can focus on managing exceptional cases along the way. With continuous visibility and control over inventory movements, warehouse teams spend less time tracking down information and correcting administrative errors.

Traceability: Real-time visibility allows businesses to track the movement of inventory items throughout the supply chain.

High-Res Data: Leverage mobile solutions to capture and analyze the extra information and job specific data inputs you care about.

Field Workers – On A Job Site

BRIDGE THE GAP BETWEEN ENTERPRISE SYSTEMS AND DAY-TO-DAY OPERATIONS ACTIVITIES

Eliminate paper and Excel-based processes, which are not only inefficient but also prone to error. Connecting the entire business with cloud-based inventory management applications and up-to-date visibility allows field crews to optimize scheduling, enhance resource utilization, and bill in real time.

Customers

Increase customer loyalty and encourage repeat business. Removing silos between the field and the back office not only benefits the members of those teams, but it also makes it easier for end customers to do business with you by increasing the number of projects done on time and in full, and helping your business move faster.

With Field Inventory, your business can gain unprecedented agility and control to evolve your inventory processes and transform your end-to-end supply chain into a truly integrated value chain.
