

Work Anywhere, Win Everywhere

YOUR GUIDE TO FIELD INVENTORY

Business doesn't wait *(and neither should you)*

Business is always on, always moving, and always present—even if you aren't. To make the best decisions, you need the most up-to-date information. But what if your business happens off the grid?

You know that going “into the field” is a completely different approach to “working remotely.” Keeping your field team and your back office up to speed depends on how information is collected, synced, and distributed.

That's where the Nextworld WMS comes into play. With mobile scanning, your field team can input data and track inventory no matter where they are—connected or not.

Field inventory in action across industries

OIL & GAS

Oil and gas doesn't happen in office buildings—it happens offshore, underground, and miles from nowhere. A mobile-first warehouse management system keeps your crews equipped and your data synced, even without a signal. Tools, parts, and safety gear move where they should, when they should. No waiting, no guessing, no scrambling. Just your team fully stocked and ready to perform.

TELECOM

Telecom teams build the connections everyone else depends on, but that's tough to do if your own data drops out. Nextworld puts every part, tool, and order right in your pocket. Whether you're starting up a new service area or racing to fix an outage, your crews get what they need without the lag. That means faster installs, quicker fixes, and happier customers.

CONSTRUCTION

Construction projects move fast and delays cost time—and money. Your teams can't afford to wait for a signal to locate the supplies they need. With Nextworld's mobile-first WMS, they can stay stocked and up to date even when a jobsite is off the grid. AKA less time hunting, more time hammering.

MINING

More than just losing the radio when driving through a tunnel, you know what it means to be under hundreds of feet of granite miles from anywhere. Even if your signal can get to your outpost, it probably isn't going to follow you underground. Whether you're managing the office or inputting sediment assessments forty feet below, you can rest assured your data stays consistent.

MEDICAL DEVICES

For medical supply companies, mistakes aren't an option. Your reps and technicians need exact lot numbers, serials, and expiration dates—whether they're in a hospital, a clinic, or a delivery van. A mobile-first warehouse management system keeps inventory accurate, compliant, and instantly accessible. Real-time updates mean no lost devices and full traceability, so your team delivers safely, efficiently, and on time.

The power of integrated field inventory

Connect your field, warehouse, and back-office teams seamlessly.

Nextworld makes cross-functional collaboration easy with real-time data at any level of connectivity. Increase visibility, reduce carrying costs, speed up inventory turns, and improve productivity.

Field workers – on the road

Manage and track inventory on the go and in real time. Your field operations teams can make sure they have the right tools and inventory to complete a job, minimizing carrying costs and reducing the risk of stockouts. Capture data from anywhere, on any device, at the point of activity.

Field workers – on a job site

Ditch paper and spreadsheet-based processes that are inefficient and prone to error. Connect your entire business with a cloud-based inventory management system. Your field crews will be able to schedule smarter, use resources more efficiently, and invoice instantly.

Back office

Give finance, operations, and executive teams a single source of truth for all your inventory data. Custom dashboards show job profitability, inventory use, asset status, and more in real time. When the back office sees the full picture, they can make smarter decisions faster.

Warehouse

Automate inbound, outbound, and storage processes so you can focus on managing exceptional cases along the way. With better visibility and control over inventory movements, your warehouse team can spend less time tracking down information and fixing avoidable mistakes.

Customers

Increase customer loyalty and encourage repeat business. Breaking down silos between your field and back-office teams means faster, more on-time and in-full projects that keep your customers happy.

Seamless data flow = *Seamless cash flow*

Your bottom line depends on your ability to quickly make the right decisions for your business. This means having the most up-to-date data available to every team, no matter where they're located. Nextworld shares information about the availability of every truck, machine, and tool in every warehouse or remote job site. Logistics is no longer a challenge, and resources aren't lost in the mix.

Say goodbye to downtime, guesswork, and clerical errors. When your entire business is connected, you can trust that every team has what they need to work efficiently and effectively.
