

Choose your unique JD Edwards modernization journey with Nextworld:

- **Innovate on the edge of your JD Edwards system.** Rapidly add new or replace existing solutions with pre-built applications from Nextworld. For example, add robust field inventory capabilities.
- **Consolidate JD Edwards and other enterprise data.** Broadly access, organize, and report across all your company data.
- **Move your customizations and extensions or add new custom and competitive capabilities.** Maintain and convert existing custom applications and spreadsheets. Craft new customizations using a single platform.
- **Consolidate and reduce ISVs.** Eliminate lightly-used and extra third-party solutions with core, composite, and custom apps built with Nextworld.
- **Full or partial JD Edwards migration to a modern platform.** Move all or part of your environment to Nextworld and enjoy the technology benefits of an enterprise-grade, no-code platform.

Nextworld delivers these capabilities for JD Edwards:

- A no-code platform for always updatable and sustainable custom and core apps. No programming knowledge required.
- Automated, configurable, and flexible business workflows that rapidly increase user productivity.
- Adaptive software makes it easy and sustainable to customize your core enterprise solutions to fit your unique competitive business needs.
- A comprehensive enterprise security model with broad audit capabilities.
- An integration-first approach with modern, efficient, and robust table-level REST connectivity.
- A fresh cloud-native platform with no legacy constraints that easily updates and upgrades.
- Unlimited customer defined attributes (CDA) for core and customized applications.

Nextworld provides a modern platform with pre-built business solutions for core finance and operations processes for JD Edwards customers. This platform lets you rapidly create and customize sustainable applications without programming, and is responsive to market disruptions, inventory and supply chain challenges, industry innovations, and evolving technologies. Our customers source, build, sell, distribute, and service products and assets by leveraging our flexibility, speed, and efficiency to exceed their business goals.

From whiteboard to application in hours. Rapidly design and deploy custom and composite apps like:

- AP automation with machine learning for multiple inputs
- Calculations engine for complex commissions and royalties
- Multi-parameter quality control testing and reporting
- Resource placement supporting unique client scenarios
- Sales order entry processes that are inherently complex

Nextworld utilities and tools speed deployment and adoption.

- Data migration utilities for JD Edwards to Nextworld
- Interactive reporting and configured dashboards
- Built-in JD Edwards connector for real-time data syncing

Innovate at your pace!

Deploy Nextworld as needed – when **you** need it – to match **your goals, your timelines** and highlight **your** competitive business **differentiators**.
