BUILT FOR BOLD THINKERS

How **Nextworld Intelligence** supercharges the developer revolution

Enterprise AI isn't just the future. *It's your secret weapon.*

Forget bolting on clunky AI as an afterthought. When a modern platform embraces native AI at its core, development isn't just faster—it's limitless. Imagine building smarter applications without starting from scratch or bolting on complexity.

Introducing: *Nextworld Intelligence*, a practical toolkit that bridges the gap between developers and business users. Woven into the foundation of the Nextworld platform, these tools remove barriers to entry, accelerate development, and unlock innovation at scale. This is AI that works for you, not against you.

The future developer doesn't code—they command intelligence

AI transforms how applications are built by creating a shared language between technical and non-technical teams. By collaborating with AI, developers and business users can now:

- Work side-by-side using the same intuitive tools
- Automate processes together without waiting for IT handoffs
- Infuse intelligence into every application without coding
- Refine AI models efficiently as business needs evolve
- Build solutions faster by combining domain expertise with technical power

This isn't just an upgrade. *It's a revolution.*

The **AI Toolkit** that speaks everyone's language

Machine Learning Toolkit

Build ML models in minutes— not months

Classify, extract information from documents, or pull insights from unstructured data, *without writing a single line of code*. Pre-trained LLMs and vision models handle the heavy lifting, so you focus on what matters: outcomes, not algorithms.

AutoML

Machine learning for everyone (not just the PhDs)

Point. Click. Predict. Democratize machine learning by automating the end-to-end development of models. Just feed AutoML data, and it:

- Identifies what matters
- Picks the best algorithm
- Trains and deploys—done

Now, every business user can make data-driven calls without waiting for a data scientist.

Agentic AI

Meet your new team: AI agents that get things done

Build and teach your own dream team of AI agents to unlock true automation, 100% code-free. These aren't simple chatbots— they're always-on problem-solvers. They plan, reason, execute, and collaborate with users and with other agents. Agents can even help build and train more agents. Productivity at scale just got real.

Conversational AI

Meet Ed— Your AI coach & wingman

Ed is so much more than a digital assistant. He's Agent Zero, your natural language gateway to the entire platform. Need to ideate, refine, or trigger workflows? Just ask. No tech jargon, no training wheels. Ed puts AI superpowers in every user's hands.

Generative AI

Stuck? Let AI unblock you

Generate apps, draft content, or rapidly prototype UI—on demand. Generative AI is your 24/7 innovation partner for creativity at the speed of thought.

Real-World AI: Where theory meets transformation

Organizations using Nextworld Intelligence are reimagining how work gets done:

- Automating remittance processing using computer vision and machine learning (*Goodbye, manual data entry.*)
- Predicting maintenance needs based on historical equipment data (*Preventing equipment failures before they happen.*)
- Enabling users to chat with enterprise systems (*Type or talk like you would to a colleague.*)
- Unlocking actionable insights in real time (*From massive data sets that used to sit idle.*)

While AI handles repetitive, data-heavy tasks behind the scenes, people are free to focus on higher-value work—like solving complex problems, building new ideas, and leading change. AI doesn't replace human creativity or judgment, it elevates it. Agent developers are enabling a future where humans can do what they do best: think big, act fast, and move businesses forward.

Ready to Build the Future— Not Just Watch It?

Nextworld Intelligence isn't another "maybe someday" AI promise. It's the toolkit for developers who refuse to wait.

***Schedule a Workshop** to see how native AI transforms development from slow and complex to fast, intuitive, and unstoppable.*
